The discovery of the first extrasolar planet in 1995 revolutionized our understanding of the universe. These planets, which orbit stars other than our own, have opened up a new window on the cosmos, allowing us to study the formation and evolution of planetary systems and search for potential signs of life beyond Earth.

The Canary Islands Winter School of Astrophysics is a world-renowned forum for the exchange of ideas and the latest research on extrasolar planets. Held annually in Tenerife, Spain, the school brings together leading scientists from around the world to share their expertise and foster collaboration.

Topics Covered

The Canary Islands Winter School of Astrophysics covers a wide range of topics related to extrasolar planets, including:

- The formation and evolution of planetary systems
- The properties of exoplanets, including their masses, radii, and atmospheres
- The search for habitable exoplanets

- The potential for life on other planets

Faculty

The Canary Islands Winter School of Astrophysics is taught by a faculty of world-renowned scientists. These include:

- Dr. Sara Seager, Professor of Astrophysics at the Massachusetts Institute of Technology
- Dr. Didier Queloz, Professor of Astrophysics at the University of Geneva
- Dr. Michel Mayor, Professor of Astrophysics at the University of Geneva
- Dr. Guillem Anglada-Escudé, Professor of Astrophysics at the University of Göttingen

Application

Applications for the Canary Islands Winter School of Astrophysics are now open. The deadline for applications is March 15, 2023. For more information, please visit the school's website.

The Canary Islands Winter School of Astrophysics is a unique opportunity to learn from the world's leading scientists about the latest research on extrasolar planets. Whether you are a student, a researcher, or simply an interested member of the public, I encourage you to apply.
