Evidence-Based Decision-Making for Urban Planners

Urban planners face a constant need for evidence-based decision-making. "Science Policy and Practice" bridges the gap between scientific research and practical implementation, empowering planners with the knowledge

and tools they need to create sustainable and livable cities. The book showcases successful examples of science-informed urban policies, demonstrating the transformative power of collaboration between researchers and policymakers.

Bridging the Science-Policy Divide

One of the key contributions of "Science Policy and Practice" is its exploration of the challenges and opportunities in bridging the science-policy divide. It highlights the barriers to effective communication and collaboration, and proposes innovative approaches to foster mutually beneficial partnerships. By fostering a dialogue between scientists and policymakers, the book aims to accelerate the translation of scientific knowledge into tangible policy outcomes.

Case Studies and Best Practices from Around the World

To provide a global perspective on science-informed urban policy, "Science Policy and Practice" presents a collection of case studies from cities around the world. These case studies showcase successful collaborations between scientists and urban planners, highlighting the diverse approaches and innovative solutions employed to address local challenges. From green infrastructure planning in New York City to urban forest management in Melbourne, these examples provide valuable lessons for policymakers and practitioners alike.

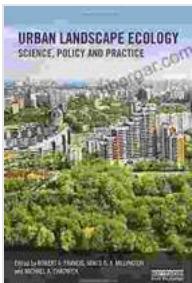

Empowering Citizens in Urban Governance

"Science Policy and Practice" recognizes the importance of citizen engagement in urban governance. The book emphasizes the need to involve local communities in decision-making processes, ensuring that

scientific knowledge and policy initiatives align with community needs and aspirations. By promoting participatory approaches, the book empowers citizens to become active stakeholders in shaping the future of their cities.

: A Valuable Resource for Urban Sustainability

In an era of rapid urbanization, "Science Policy and Practice: Routledge Studies in Urban Ecology" is an essential resource for anyone involved in the planning, development, and governance of cities. Its comprehensive coverage of the science-policy nexus, insightful case studies, and innovative approaches provide invaluable guidance for creating sustainable, resilient, and livable urban environments. By bridging the gap between science and policy, this book empowers policymakers, urban planners, scientists, and citizens to work together towards a brighter urban future.
