

Unlock Chemistry: A Comprehensive Guide for Revisiting Missed Learning

Learning in a clinical setting

Preoperative assessment clinic: a missed learning opportunity?

Jessamy Bagenal, Zoe Barber, Kapil Sahnan and Ashok Handa, Department of Surgery, John Radcliffe Hospital, Oxford, UK

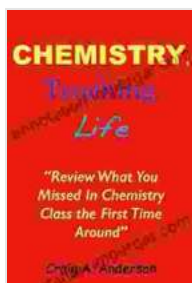

SUMMARY
Background: Day-case surgery, theatre direct admissions and elective surgery have revolutionised the hospital patient's pathway, and have facilitated the length of their hospital stay. However, with large numbers of medical students placed in busy teaching hospitals, there is an opportunity to enhance their exposure to clinical signs in surgery.
Objective: We aimed to assess the preoperative assessment clinic as an appropriate teaching venue to offer medical students exposure to clinical signs.
Methods: Junior doctors assigned to the preoperative assessment clinic were asked to fill out a specially designed questionnaire for each patient they reviewed. This included the planned operation, presenting complaint, and identification and categorisation of objective clinical signs on examination. The junior doctor also noted whether the patient was suitable for, and amenable to, having medical students observe. The presenting complaints and clinical signs were referenced to the curriculum for Oxford University's second Bachelor of Medicine examinations (Final 1).
Results: Of the 420 patients seen in 40 clinics, 171 (41%) referred to be seen by medical students. Of the remaining patients, 89 (21%) had presenting complaints listed on the core curriculum for Oxford University's second Bachelor of Medicine examinations and objective clinical signs on examination. Only three patients (1%) had further clinical signs not covered by the core curriculum.
Conclusions: The results clearly demonstrate that a preoperative assessment clinic is a venue that would give medical students two important opportunities: to examine objective clinical signs and to take histories of presenting complaints from the core curriculum. This learning opportunity would otherwise be missed.
